

Deploying App to Play Store

Step 1: Generating signed App Bundle

- Open project in Android Module
Android[ecmmmerce_android] -> Right Click -> Flutter -> Open Android Module in Android Studio
- Build -> Generate signed bundle/apk -> Android App Bundle
- Create new key store path and set password
Ex: D:\keystore\ecom.jks
Password : ecom@123
- Create key alias
Ex: key0, Password : ecom@123
- Choose release -> Finish. Android studio generates signed app bundle
- App bundle will be generated

Step 2: Publishing App to Play Console

- Login to a valid Google play console account
- Click on create app
- Enter all the details related to the app like App content, Permissions, Privacy policy, Content rating,etc
- Upload the signed abb to Play console
- Fill the release notes and click on Start Rollout to Production
- Google Play team will validate the app and app will be published within 2 - 3 working days
